linkedin.com/in/farhan-aziz-harahap

Informatics student at Universitas Putera Batam who builds database-backed web applications and automation tools with a testing-first mindset — feature tests, continuous integration, and documented projects. Currently strengthening Swift fundamentals while preparing to bring this engineering rigor to Apple's ecosystem.

PROJECTS

Hotelaz — Hotel Management System Laravel · PHP · Tailwind CSS · MySQL · PHPUnit 2025

- Built a full hotel-management web app: room browsing, reservations, payment-proof upload, email notifications, and an admin dashboard with revenue statistics.
- Designed overlapping-date availability logic that prevents double bookings across each room's unit quantity.
- Wrote 18 feature tests (43 assertions) covering reservations, authorization, and email flows; wired to GitHub Actions CI.

XAUUSD ICT Trading Signal Bot Python · MetaTrader 5 · SQLite · Streamlit · Telegram 2026

- Implemented a rule-based trading-signal engine (ICT Silver Bullet: FVG detection, session filters, confluence scoring) integrated with MetaTrader 5.
- Designed a dual-tier architecture separating the real-time scanning engine from an asynchronous Telegram interface.
- Built risk management with ATR-based stop loss and R:R validation, plus a walk-forward backtest engine to counter overfitting.
- Delivered a Streamlit analytics dashboard tracking historical win rate from SQLite trade records.

Twitter/X Keyword Scraper Python · Twikit 2026

- Built a keyword-based post collector with automatic cookie-based account rotation to survive rate limits; exports structured CSV/JSON.

Form PHPMailer — Contact Form with Email Delivery PHP · PHPMailer · MySQL 2025

- Built a validated contact form storing messages in MySQL with SMTP email delivery via environment-based credentials (no secrets in source).

EDUCATION

Universitas Putera Batam Informatics (S1) 2023 — present

SKILLS

LANGUAGES

PHP, Python, SQL, JavaScript, Swift (basic)

FRAMEWORKS & LIBRARIES

Laravel, Tailwind CSS, Streamlit, Twikit

TOOLS & PRACTICES

Git & GitHub, GitHub Actions (CI),
PHPUnit, Vite, testing-first development

CURRENTLY LEARNING

Swift fundamentals through online playgrounds — porting object-oriented concepts from my PHP/Python projects · Preparing for **Apple Developer Academy @ Infinite Learning, Batam (Cohort 2027)**

PORTFOLIO

Case studies with problem, process, and outcomes for every project above: [website](#) · [GitHub profile](#)
